

JRCure MBF *Free Radical Type I*

Description

CAS No.: [15206 - 55 - 0] Methyl BenzoylFormate

JRCure MBF is a versatile highly efficient Free Radical Type I non-yellowing liquid photoinitiator which is used to initiate the UV polymerization of chemically unsaturated prepolymers (e.g. acrylates) in combination with mono- or multi-functional vinyl monomers and oligomers.

$C_9H_8O_3$

Physical Properties

Appearance:	slight yellow liquid	Purity:	≥99%
MW	164.16	Melting point:	-8°C
Density at 20°C:	1.161 g/cm ³	UV-Absorption:	255nm/325nm
Water solubility	2 g/L @ 20 °C
